T1. a) How is the buoyancy term, ρg_i, re-written in incompressible flow? (5p)

b) How is the production term modeled in the $k-\varepsilon$ model? Show how it can be expressed in $\bar{s}_{ij}$ (5p)

T2. a) The exact Poisson equation for the pressure fluctuation reads (5p)

$$\frac{1}{\rho}\frac{\partial^2 p'}{\partial x_j \partial x_j} = \underbrace{-2\frac{\partial \bar{v}_i}{\partial x_j}\frac{\partial v'_j}{\partial x_i}}_{\text{rapid term}} - \underbrace{\frac{\partial^2}{\partial x_i \partial x_j}\left(v'_i v'_j - \overline{v'_i v'_j}\right)}_{\text{slow term}} \tag{1}$$

Derive this equation.

b) Consider streamline curvature for a streamline formed as a circular arc (convex curvature). Show that the turbulence is dampened if $\partial v_\theta/\partial r > 0$ and that it is enhanced if the sign of $\partial v_\theta/\partial r$ is negative. (5p)

T3. a) What is a realizability constraint? Give the main realizability constraint for the normal stress and the shear stress. The Boussinesq assumption may violate one of those two constraints: show which one. (5p)

b) Show how a sinus wave $\sin(\kappa_c x)$ corresponding to cut-off is represented on a grid with two and four nodes, respectively. How is κ_c related to the grid size Δx for these cases? (5p)

T4. a) Consider the energy spectrum. Show the three different regions (the large energy-containing scales, the $-5/3$ range and the dissipating scales). In which region should the cut-off be located? How are k, k_{res} and k_{sgs} computed from the energy spectrum? (5p)

b) Consider a 1D finite volume grid. Carry out a second filtering of $\bar{v}$ at node I and show that $\bar{\bar{v}}_I \neq \bar{v}_I$. (5p)

T5. a) Explain what is DES. The length scale in the RANS S-A model reads $\left(\frac{\tilde{\nu}_t}{d}\right)^2$; how is it computed in the corresponding DES model? (5p)

b) Consider the SAS model. How is the von Kármán length scale defined? An additional source term is introduced in the ω equation: what is the form of this term? What is the object of this term? When is it large and small, respectively? (5p)
